

BioPrime 5-5-5 Instructions for Use

AGARWOOD

BioPrime 5-5-5 Impact

INPUT COST SAVING

Synthetic fertilizer offset by 50% and reduce or eliminate pesticides

INCREASED YIELD

Proven for significant impact on yield.

PROTECTION

Reduces or eliminates pesticides.

DROUGHT RESISTANCE

Better rooting systems.

BRINGS THE SOIL BACK TO LIFE

Guaranteed Analysis

Total Nitrogen (N)	0.5%
Available Phosphate (P205)	trace
Soluble Potash (K)	10%
Other Ingredients	89.5%
	100%

Major Other Ingredients: 89.5%

Algae	Micro-Nutrients
Bacteria	
Fungi	
Sea Kelp	
Mineral Electrolytes	
Humic & Fulvic Acids	

The Natural Advantage

BioPrime 5-5-5 is an all-natural nano-fertilizer that stimulates the growth of the plant and life in the soil. This has a dramatic effect on increasing yield and harvest quality and will allow the plant to naturally fight pests and disease. BioPrime is proven to also permit inorganic fertilizer to be reduced by 50%, saving input costs while increasing yield.

Activation Protocols

BioPrime 5-5-5 must be first activated before use. Using non-chlorinated water, it is stirred and left in a covered but ventilated container for 48 hours, and then further diluted prior to application. Dilution rates are provided below. If non-chlorinated water is not available, chlorinated water may be left in an open container for 48 hours in the sunlight prior to use. Consume the activated and diluted product within 10 days.

Application Rates

It is recommended to follow these application protocols to be applied per 1,250 agarwood trees. Treatment should be applied in the morning (6am to 10am) and not if raining.

Immediately upon planting

Activate 15 grams of BioPrime 5-5-5 in 6 litres of water 48 hours prior to application. On the day of treatment, using a 16 litre backpack sprayer, take 1 litre of activated BioPrime 5-5-5 concentrate and dilute with a further with 15 litres of water. Spray evenly in an amount of 75 millilitres per seedling until it is disbursed. Repeat the Dilution/Application process, until the 6 litres of activated concentrate has been consumed.

90 days after planting

Activate 15 grams of BioPrime in 6 litres of water and follow the procedure for activation and application, as detailed above.

180 days after planting

Activate 15 grams of BioPrime in 6 litres of water and follow the procedure for activation and application, as detailed above.

Repeat treatments

It is recommended to repeat every 90 days or 180 days if budget permits.
